Empathy Map Canvas

Date	30 September 2026
Team ID	SWTID-2026-8263
Project Name	Import Data Using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Template description: An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Reference: <https://www.mural.co/templates/empathy-map-canvas>

Project context: The empathy map focuses on HR personnel/HR managers who need to maintain employee skill and training information securely, and employees whose records must be accurately represented.

SAYS	"I need employee training/skill information in one place." "I need the employee's department and other details to be available for reporting." "I should be able to import spreadsheet data without manually entering every record." "Only authorized HR users should be able to access or modify these records."
THINKS	"Manual data entry can cause errors and duplicate records." "If employee information changes, the system should update the correct record." "Reports should help me understand employees by department and location." "Employee information must not be exposed to unauthorized users."
DOES	Collects employee information in spreadsheets. Imports data into the ServiceNow system. Reviews and updates employee records. Uses reports/dashboards to analyse employees by location and department. Relies on employee ID to identify an existing employee record during import.
FEELS	Concerned about inaccurate or outdated employee records. Concerned about privacy and unauthorized access.

	More confident when data imports complete successfully and records are easy to report on.
GOALS	Maintain a centralized employee skill/training record. Reduce repetitive manual data entry. Match imported data to the correct employee using Employee ID. Make department/location information available for reporting. Restrict access to authorized HR users.
PAINS / CHALLENGES	Scattered spreadsheet-based records. Manual updates can be time-consuming and error-prone. Duplicate records may be created if existing employees are not matched correctly. Limited visibility for reporting and analytics. Security and access control must be enforced.

Empathy Map – Key Insight

The user needs a centralized and secure ServiceNow-based Skill Wallet that can accept structured spreadsheet data, identify employees reliably, support reporting, and restrict sensitive employee information to authorized users. These needs directly informed the selected solution and later development activities.
